The blasticidin S resistance gene (*bsr*), originally isolated from *Bacillus cereus*, was studied in *Bacillus subtilis*. It was found that a 617 bp fragment including the intact *bsr* gene and its 5' flanking region could confer BS resistance on *B. subtilis* when integrated in its chromosome, even in a single copy state. The construction of a *bsr* gene cassette and its practical application as a novel selection marker for *B. subtilis* are reported.
