Process of Rehabilitation in the Iron and Steel Industry of West Germany

by Noboru Yamamoto

The iron and steel industry which is understood as forming the basis for overall economic rehabilitation of the country, has been taken up in this article, and its process of recovery from postwar devastation has been analyzed.

The analysis deals with the series of postwar events such as the partition of the country into occupation areas, war devastation, dismantling of production facilities, dissolution of large concerns and the restrictions put upon production which had all dealt serious blows to the recovery of the industry. A change in U. S. world policy accompanying anti-communist consciousness, and in particular, the initiation of the Marshall Plan Aid had thrust new momentum on its process of rehabilitation. The nature of role the industry was given to play after its participation in the "European Coal and Steel Community" is also taken up.

The object of this article is to seek perspective into the role the iron and steel industry of West Germany will play in the future economic development of Europe.

Social Policy and the Reproduction of the Labour Force

—Material and Cultural Framework
in the Theory of Lohnarbeit—

by Masayoshi Chubachi

Social Policy, when regarded as a compound of economic policy of a capitalistic state, becomes by nature a form of market policy in which human labour is essentially dealt with as a commodity. The source of human labour as a factor of production is "home life." It is the most typical and natural unit of man.

While the reproduction of the human labour force is dependent upon the structure of "home life" and is consumed in the process of production, the theory of "Lohnarbeit" when proposed in particular as opposing the theory of capital, should be regarded as a natural scientific approach to the human framework of labour force reproduction.

The labour market is the competing field between the economic principle of capitalistic production and the biological or ecological principle of the reproduction of the labour force.
