## Preface

<b>1</b>	<b>The philosophy of measurement theory</b>	<b>1</b>
1.1	How to construct “measurement theory” . . . . .	1
1.2	What is measurement theory? . . . . .	4
1.3	Measurement theory in engineering . . . . .	10
1.4	The spirit of “the mechanical world view” . . . . .	12
<b>2</b>	<b>Measurements (Axiom 1)</b>	<b>15</b>
2.1	Mathematical preparations . . . . .	15
2.2	Observables . . . . .	21
2.3	The meanings of observables and crisp observables . . . . .	26
2.4	Measurement (Axiom 1) . . . . .	29
2.5	Remarks . . . . .	30
2.6	Examples . . . . .	33
2.7	Operations of observables . . . . .	42
2.8	Frequency probabilities . . . . .	45
2.9	Appendix (Bell’s thought experiment) . . . . .	49
2.9.1	EPR thought experiment . . . . .	49
2.9.2	Bell’s thought experiment . . . . .	51
<b>3</b>	<b>The relation among systems (Axiom 2)</b>	<b>55</b>
3.1	Newton Equation and Schrödinger equation . . . . .	55
3.2	The relation among systems (Definition) . . . . .	58
3.3	Examples (Several tree structures) . . . . .	60
3.4	The relation among systems (Axiom 2) . . . . .	64
3.5	Heisenberg picture and Schrödinger picture . . . . .	66
3.6	Measurability theorem . . . . .	67
3.7	Appendix (Bell’s inequality) . . . . .	69
3.7.1	Deterministic evolution or Stochastic evolution? . . . . .	69
3.7.2	Generalized Bell’s inequality in mathematics . . . . .	70
3.7.3	Generalized Bell’s inequality in Measurements . . . . .	73
<b>4</b>	<b>Boltzmann’s equilibrium statistical mechanics</b>	<b>75</b>
4.1	Introduction . . . . .	75
4.2	Dynamical aspects of equilibrium statistical mechanics . . . . .	78
4.3	Probabilistic aspects of equilibrium statistical mechanics . . . . .	86
4.4	Conclusions . . . . .	88
4.5	Appendix (The law of large numbers) . . . . .	90
<b>5</b>	<b>Fisher’s statistics I (under Axiom 1)</b>	<b>91</b>
5.1	Introduction . . . . .	91
5.2	Fisher’s maximum likelihood method . . . . .	92
5.2.1	Fisher’s maximum likelihood method . . . . .	92
5.2.2	Monty Hall problem in PMT . . . . .	105

5.3	Inference interval . . . . .	107
5.4	Testing statistical hypothesis . . . . .	110
5.5	Measurement error model in PMT . . . . .	117
5.6	Appendix (Iterative likelihood function method) . . . . .	121
<b>6</b>	<b>Fisher's statistics II (related to Axioms 1 and 2)</b>	<b>127</b>
6.1	Regression analysis I . . . . .	127
6.1.1	Introduction . . . . .	127
6.1.2	Regression analysis I in measurements . . . . .	130
6.2	Bayes operator, Schrödinger picture, and S-states . . . . .	134
6.3	Regression analysis II in measurements . . . . .	142
6.4	Conclusions . . . . .	147
<b>7</b>	<b>Practical logic</b>	<b>149</b>
7.1	Measurement, inference, control and practical logic . . . . .	150
7.2	Quasi-product observables with dependence . . . . .	151
7.3	Consistency and syllogism . . . . .	156
7.3.1	Consistent condition . . . . .	156
7.3.2	Practical syllogism . . . . .	162
7.4	Conclusion . . . . .	168
7.5	Appendix (Zadeh's fuzzy sets theory) . . . . .	169
7.5.1	What is Zadeh's fuzzy sets theory? . . . . .	169
7.5.2	Why is Zadeh's paper cited frequently? . . . . .	172
<b>8</b>	<b>Statistical measurements in <math>C^*</math>-algebraic formulation</b>	<b>175</b>
8.1	Statistical measurements ( $C^*$ -algebraic formulation) . . . . .	176
8.1.1	General theory of statistical measurements . . . . .	176
8.1.2	Examples of statistical measurements . . . . .	182
8.1.3	Problems (statistical measurements) . . . . .	188
8.2	General statistical system (Example) . . . . .	193
8.3	Bayes theorem in statistical MT . . . . .	195
8.4	Kalman filter in noise . . . . .	199
8.4.1	The measurement theoretical formulation of Figure (8.45) . . . . .	200
8.4.2	Kalman filter in Noise . . . . .	202
8.5	Information and entropy . . . . .	204
8.6	Belief measurement theory (=BMT) . . . . .	208
8.6.1	The general argument about BMT . . . . .	209
8.6.2	The principle of equal weight . . . . .	212
8.6.3	Is BMT necessary? . . . . .	216
8.7	Appendix (Bertrand's paradox) . . . . .	218
8.7.1	Review (Bertrand's paradox) . . . . .	218
8.7.2	Bertrand's paradox in measurement theory . . . . .	219
<b>9</b>	<b>Statistical measurements in <math>W^*</math>-algebraic formulation</b>	<b>225</b>
9.1	Statistical measurements ( $W^*$ -algebraic formulation) . . . . .	225
9.2	The relation among systems (Proclaim $W^*$ 2 in SMT $W^*$ ) . . . . .	236
9.3	Quantum mechanics in $B(L^2(\mathbf{R}))$ . . . . .	244
9.3.1	Schrödinger equation and Heisenberg kinetic equation . . . . .	244
9.3.2	A simplest example of Schrödinger equation . . . . .	245
9.3.3	The de Broglie paradox . . . . .	247
9.4	The method of moments . . . . .	248
9.4.1	The moment method . . . . .	248
9.4.2	Example 1 [Normal distribution (= Gaussian distribution)] . . . . .	250
9.4.3	Example 2 (measurement error model in SMT) . . . . .	252
9.5	Principal components analysis in MT . . . . .	255

<b>10 Newtonian mechanics in measurement Theory</b>	<b>261</b>
10.1 Kolmogorov's extension theorem in $W^*$ -algebra . . . . .	261
10.2 The definition of "trajectories" . . . . .	264
10.3 Trajectories and Newtonian mechanics . . . . .	266
10.4 Brownian motions . . . . .	269
10.5 Conclusions . . . . .	273
<b>11 Measurement error</b>	<b>275</b>
11.1 Approximate measurements for quantities . . . . .	275
11.2 The estimation under loss function in statistics . . . . .	277
11.3 Random observable . . . . .	282
11.4 The principle of equal probability . . . . .	288
<b>12 Heisenberg's uncertainty relation</b>	<b>293</b>
12.1 Introduction . . . . .	294
12.2 Example due to Arthurs-Kelley . . . . .	297
12.3 Approximate simultaneous measurement . . . . .	299
12.4 Lemmas . . . . .	306
12.5 Existence theorem . . . . .	308
12.6 Uncertainty relations . . . . .	311
12.7 EPR-experiment and Heisenberg's uncertainty relation . . . . .	315
