Yoshiko TANGE and Shoji HIZATATE

望月正隆, 道廣幸三, 塩見佳津子, 伊藤 啓, 丹下佳子, 膝舘祥治

Acetone alkylhydrazones were readily autooxidized to 2-alkylazo-2-propyl hydroperoxides, which were directly mutagenic in *Salmonella typhimurium* TA 1535, TA 100, TA 102 and *Escherichia coli* WP2 $hcr^-$ . The mechanism of this mutagenicity presumes that the hydroperoxides in aqueous solution decompose to alkyl diazonium ions which were observed in the alkylation of 4-(*p*-nitrobenzyl)pyridine, and also to hydroxyl radical which was detected by ESR.
